

Correctly evaluating tightness is critical to maintaining double seam quality, but visually inspecting the cover hook to determine wrinkle rating can be challenging.

During the inspection process, SeamMate® software automatically calculates seam tightness by analyzing the geometry of captured seam images.

Inspector observed tightness rating

System calculated tightness rating

OneVision's patented Automatic Seam Tightness measurement provides inspectors and quality managers with assurance that the visual cover hook inspection was accurate, or it can serve as an alternative to manual cover hook removal.
